TransferWise, a two-year-old UK-based start-up that lets you move money between different currencies instantly and at a low cost, has this week announced the launch of its support for Bitcoin.

Previously, the firm only supported an easy-to-use Web-based method of transferring money to another person or company, but now, in addition to that, the company will allow you to “move” funds through the Bitcoin cryptocurrency. “If you’ve got access to a Bitcoin wallet, you can then send and receive funds between the two currencies as easily as sending a conventional bank transfer or paying

with a Visa card,” explains TransferWise. “You can also get a ‘waiver of exchange’ if you’re sending a lot of money across the UK border – which means you can avoid paying the 3% fees that we charge to pay out in pounds.” The announcement follows a similar launch from another UK-based start-up, Startcoin, last week.

TransferWise explains: “When it comes to money, we use a different approach to traditional finance. We let you connect and transfer money across borders – so we can charge a low exchange rate to help send money to the places you want to go and for the right time.” The approach, of course, stands in contrast to that of traditional banks, which charge higher exchange rates

and incur fees that can add significantly to the cost of sending money internationally. The company, which also offers a free money management app for iOS and Android devices, is founded by brothers Nat and Guy Shulman. Both are graduates of the University
