The following plot shows a slice of the correlation function at constant t in the complex time plane:  This plot reveals that the correlation function is non zero for complex values of t . The behavior of this function for large values of t is described by Eq. . Moreover, the plot reveals that the correlation function is almost a real function for imaginary values of t . It is also possible to see that $X(x,t)$ is almost a real function for real values of t and for large values of x . Let us now study the structure of the singularities of the correlation function. The plot of the correlation function $X(x,t)$ in the complex plane is given in the following plot. $X(x,t)$ with $a=1$ for $\mu=1.5+0.5i$, $2+2i$, $4+4i$, $6+6i$ and $8+8i$
