In the biggest change of its kind, the government will now expect companies to set up and disclose the carbon emissions of their entire business and not just their operations in Britain. The government also wants carbon pricing – which includes cap and trade schemes – to be introduced in the UK, which will force firms to comply with new regulations or pay into a national fund. The Department of Energy and Climate Change (Decc) said the new rules will be in place by April 2014. It is the first time that financial planning has been brought to the mainstream since the government issued its so-called “zero carbon” business planning guidance in July 2011. The new rules, which will be published in the next few weeks, mean that firms will be forced to consider the total carbon footprint of the products they make, including furniture, fabrics, jewellery and other goods. They will also have to do so in all countries where their products are sold. The new rules, which are expected to cost firms an estimated £20bn a year, were demanded by the legal action brought against the energy companies by ex-employees from firms including PriceWaterhouseCoopers, Ernst & Young and H & G. Lord Turner, who used to run the Financial Services Authority, said: “The introduction of a cap-and-trade system would be a massive sea-change in the way business is done. In the UK it would be the first step towards a British carbon price, and we should be ambitious in seeking a similar approach.” Government sources have warned that the introduction of a price on carbon will be controversial and that the success a1d647c40b
