Following the development of the latter in 2006, AutoCAD Mobile was released in 2007. It was the first AutoCAD application with native iOS support. With a version for the Android platform released in 2010, AutoCAD Mobile was the first fully native mobile CAD application to reach the top 2 mobile app charts in both App Store and Play Store. Today, AutoCAD Mobile (iOS and Android) is the primary mobile application for AutoCAD, with its version for iPad used primarily for engineering projects, and for Android, as a standalone CAD package. AutoCAD 2010 The AutoCAD software is most well known for its desktop graphical user interface. Its functions are divided into two main categories, namely Object-based and Parametric. AutoCAD's Object-based functions include creating, editing, viewing, and managing objects, blocks, and other CAD entities such as features, profiles, boundary, and components. AutoCAD's Parametric functions include creating, editing, viewing, and managing parametric entities, such as surface, point, line, circle, arc, spline, and text. Two main user interfaces are used: the ribbon interface, or Tabs, and the mobile interface (see below), which does not support the ribbon interface. The People's Bank of China said on Tuesday China's economy grew 6.9 percent in the first half of this year, lower than a previous estimate of 7.1 percent, on the back of declining property investment and exports. Some analysts said the weakness was likely to worsen next year, with a potential slowing of credit growth and a slowdown in Chinese demand for overseas goods, especially raw materials. With iron ore and copper prices hit

by weak demand, and steel and coal prices at multi-year lows, a cycle of decline is under way, they said. "We are likely to see more economic headwinds," said Zhang Liqiang, chief strategist at Shanghai Fosun Securities. "There is not much upside potential." While the economy grew at a relatively strong clip in the first half, the data showed it was far from healthy. Growth in industrial production and fixed-asset investment was the slowest pace since the global

financial crisis in 2008, with both shrinking. Consumer spending was also weaker than expected, which has raised questions about Beijing's ability to boost growth. The economy grew 6.9 percent in the first half of this year, slowing from 6.2 percent in the same period last year, official data showed on Tuesday. It also missed analyst estimates of 7.1 percent growth, the weakest rate since 3.5 percent in 1998. "Looking ahead, we suspect GDP growth will slow further this year and next year due to a series of challenges facing the economy, including the new round of trade friction with the United States, the cooling of China's investment sector, and ongoing reduction of household consumption,"
