VBA is a macro programming language, or a group of programming languages designed to automate tasks using user interface elements such as buttons, menus, scroll bars, and toolbars, such as in Microsoft Office and some applications that use the Microsoft Windows operating system. VBA was introduced in AutoCAD in 1998 with Release 16. In 2009, AutoCAD was the first Microsoft application to support VBScript. The AutoCAD Architecture and AutoCAD Electrical products were discontinued on April 1, 2018. In November 2018, Autodesk released eDrawings Manager for AutoCAD that allows content to be delivered to the Autodesk eDrawings platform from AutoCAD. eDrawings Manager allows annotations, geospatial content and shapes to be updated across a business process from a single data model. Q: Extension function from template class i have a problem with template class. template struct Bar{ template T create() { return T(Args...); } }; and i have struct Elem{ Elem(){} template void Set(F& f, Args... args){ f.emplace_back(args...); } template void Set(F& f, Args... args){ f.emplace_back(args...); } }; and this is how i call it Bar bar; bar.Set(Elem(), 1, 2, 3); but i want to create this function inside template class so i did this template void Set(F& f, Args... args){ f.emplace_back(args...); } and inside Bar class i have this template T create() { return T(Args...); } but when i want to call it with this bar.create(); i got this error error: no matching function for call to 'Bar::create()' note: candidate is: T create() What am i doing wrong? A: The problem is that std::vector::emplace_back expects a single argument T const &, so your Set method should be modified to match it: template void Set(F &f, Args... args){ f.emplace_back(args...); } Also note that it is not necessary to write two versions of the Set method, as the template argument F can be deduced from the first argument: template struct Bar{ template

What's New In?

Single-window editing: Edit multiple drawings at once in a single window, making it easier to see and change values from multiple drawings at once. Freehand and path-based annotation tools: Freehand tool with a pen and customizable styles for drawing and labeling shapes and other objects. You can even use it as a selection tool to add elements to a drawing. Graphic styles: Create new or edit existing styles. Each style consists of properties that control the look of shapes and other items. You can edit properties for a style, or create new properties. Or combine styles to create custom shapes or labels. New markup commands for annotating Create and edit your own markers in a drawing. Link them together to create custom annotations. Send feedback directly to your drawing from these annotations. (video: 11:20 min.) Enlargement control: Locate your objects, measure their boundaries and drag to bring them into view. Zoom to get close to the object. Smooth zooming Create a zoom perspective that matches the paper orientation in the drawing, reducing magnification distortion. You can use the lens feature to change the perspective smoothly while you zoom in and out. (video: 1:23 min.) Relative layer filtering Select multiple layers to temporarily hide them from the drawing window. When you're ready to bring the hidden layers back to the window, you can select which ones to show. New relative and absolute layers Create and edit relative layers in your drawings. These layers are based on other layers in your drawings, and are useful for organizing layers. You can also use the absolute layer to select the entire drawing. (video: 1:05 min.) Send and received annotation packages: Easily share an annotated drawing with others using annotation packages. Review and edit your received annotation packages directly in your drawing. When you receive an annotation package, you have the option to accept or reject it. Custom templates: Create new templates using predefined objects and properties. You can use the new templates to make it easier to edit content of your drawings. (video: 1:15 min.) Communication tools: Search and filter comments and ratings directly in the comments field. You can also see when your comments have been added to the drawing. New formatting tools: Convert text to shapes, add
