## **FileLab Audio Editor**

[clear] FileLab Audio Editor is a straightforward and simple-to-use software application that allows you to edit and enhance your audio tracks by resorting to an installed web browser. It comes packed with several handy settings that should be easy to figure out, regardless of your previous level of experience with such apps. The app offers support for an extensive range of music files, including WAV, AAC, MP3, M4A, FLAC, OGG, MKA and AMR. Easy setup and intuitive interface The installation procedure is an extremely simple task. However, you should keep in mind that FileLab Audio Editor has to install the FileLab plugin in your web browser, needed for working with this tool. As far as the interface is concerned, the software utility is attractive and easy to navigate. Once an audio track has been selected, you can view its waveform, zoom in and out, study the currently playing time, as well as cut out sections, copy and paste them. Enhance audio tracks with effects It is possible to amplify sound, apply a fade in and out effect, normalize the volume or mute it, set a limiter, enable automatic correction, set a delay time, stretch time, configure an equalizer, apply reverb, and others. Some of these effects comes with their own set of adjustable settings. For example, when it comes to the delay, you can tweak the echo level, delay time, and feedback. Generate new files with different extensions Once all modifications are made, you can generate a new sound file with the new settings or overwrite the current one. Undoing and redoing actions is possible, so you can correct any mistakes before committing changes. An important aspect worth taking into account is that FileLab Audio Editor lets you save the new file with a format different from the original one, which means that it permits audio conversion. The supported output profiles are MP3, WMA, M4A, OGG, WAV and FLAC.
