The effect of 8-hydroxyquinoline on cellular differentiation and the process of enzymatic hydrolysis of the platelet-activating factor in thymocytes. 8-Hydroxyquinoline (8HQ) is known to selectively inhibit phospholipase A2 (EC 3.1.1.4) from several sources. We found that 8HQ inhibits completely the process of cellular differentiation in mouse thymocytes obtained on day 3 of the two-step culture period. In addition, 8HQ completely blocks the in vitro hydrolysis of the physiological platelet-activating factor (PAF) by partially purified "lytic" phospholipase A2 from mouse spleen.Q: How to organize a program with several configurations in Python I have a program that is used for different purposes at different times, each of which requires different configuration information. It is used from a command line, it needs to call a bunch of files, and read in a bunch of new configuration values. It's a bit of a mess. I've been trying to put it into one of these module classes, but I'm not even sure if this is the right way to do it. How should I organize my program? Do I just create a base class for each configuration? A: I think the best option is to consider a different approach. Something like this: class Functor(object): def \_\_init\_\_(self, \*options): self.options = options def \_\_call\_\_(self): return do\_something(self.options) functor\_configs = { 'do\_foo\_bar': Functor('foo', 'bar'), 'do\_baz': Functor('baz', 'qux') } def run\_funcutors(): for k, f in functor\_configs.items(): f(k) run\_funcutors() functors.py I would definitely avoid using option classes as they are often hard to test. I am assuming the number of settings is small so it is not a big deal to throw them in an options dictionary. A slightly different approach that may be better is to have a separate module for each class. This

Still, Dickie's not really that much more a commercial pilot than, say, Jimmy Olsen, but he does have more experience as an investigator than Lois Lane. At any rate, the likes of Chuck Heston, Chuck Connors, and, of course, Dick Smits, have used the JetBlue or U.S. Airways acronym of the day to shed some light on the complicated world of aviation (and how the captain typically starts in the back...). But as it turns out, the actual plane that Dick is piloting, from here on out called the "DePete," has a somewhat less straightforward acronym. Obviously, Dick's not around to be told about "scrub pants," right? Of course, that doesn't mean he can't share some other little-known facts and other-ordinary-truths about his jet. After all, as there are many, many more Dickie Petes out there, we figured that it was about time to cut back on the Dick DePete. From this point on, in a Dickie Peters-ish manner, the Dick DePete will remain unc
