Open TX700W Latin by OrTHoTaMiNe Rar (500Mb)Graphics display terminals (VDTs) are used in a variety of applications including remote computer control and information display systems. They typically use a cathode ray tube (CRT) for displaying graphics and text. A typical VDT includes a host processor, a cathode ray tube display, and a pointing device such as a mouse, trackball, or trackpad. The host processor is used to control the CRT and the pointing device to move a cursor across a screen on which images are displayed. Recently, however, liquid crystal display (LCD) based VDTs are becoming increasingly popular because of their faster response time, lighter weight, and lower power consumption. In some of these applications, the display is configured with a touchscreen that allows a user to directly input information to the host processor through the touchscreen. When using a touchscreen for an image display device such as a VDT, however, several problems may arise. In particular, the touchscreen may be difficult to use and configure in an effective manner. Touchscreens are typically flat
