ZKanji is a JLPT N3 practice program. The JLPT N3 is a standard test for non-native Japanese speakers to learn and master the spoken language. ZKanji is a more comprehensive learning tool that covers the entire language and its grammar. Unlike other software, ZKanji teaches you the correct meaning of the symbols, the order of the strokes and the reading of each Kanji character. You can practice with more than 300 Kanji symbols, from single characters all the way to the typical symbols used in the complete sentence. ZKanji can also be used to study and learn Japanese Hiragana and Katakana characters, as well as Kana characters subdivisions, such as the phonetic syllabary, Hiragana and Katakana. It allows you to associate several words together in different groupings, which you can study more intensely. You can practice with your Kanji dictionary and Kanji in a simple or difficult way, depending on your desire. You can select a particular Kanji character by either typing the reading or by using the Kanji information window. Moreover, the software provides you a selection of reading and writing Kanji practice exercises, which you can use either in your study program or on your own, depending on your need. You can take online test as well as a full-test to evaluate your progress. You can save your progress through ZKanji and transfer it to other computers. This is made possible by the optional registration of ZKanji. You can export your progress to text format files, to make your own study book or to help you with learning more Kanji characters. Language support: Japanese Language Support (JLS) Kana script Support (CS) Latin Alphabet Support (LS) Phonetic script Support (PS) Hiragana and Katakana script Support (KS) ZKanji Description: ZKanji is a JLPT N3 practice program. The last period of my bachelor thesis was dedicated to the use of NLP in the field of Software Assurance. This document summarises my findings during the investigations I have made. As discussed in the introductory chapter, the implementation of a NLP system in the context of risk management means solving a particular problem and, as consequence, it implies to identify that problem. Despite this, several problems can be found if a system is adopted in a bigger context. An important aspect to consider when adopting a
