The first thing one notices about the new Mercedes Benz A45 AMG from the outside is that it is enormous. The A45 is a three-pointed star. Its wheelbase is almost 100mm longer than that of the older A35 AMG and the body has been widened a full 20mm on all sides. The car also rides on ultra-wide 18-inch wheels and comes with optional carbon ceramic brakes, the company's biggest and boldest option. When it comes to performance, there is a 20 percent increase in the 4.6-liter V8 in the 2015 model. It produces a whopping 577 horsepower and 553 lb-ft of torque. The A45 AMG also has a new transmission, the AMG 8-speed automatic. When the new A45 AMG launched in the summer, we drove it to the hills of Laois and Limerick in Ireland, looking for the best roads to showcase its power. But with so many roads, it would take months to cover them all. The A45 AMG is a compact, mid-sized, muscular four-door coupe. It is street-driven and fun to drive. Its straight-line acceleration

will take you to 150 kilometers per hour in 5.2 seconds. The ride is controlled by AMG's race-bred, quattro permanent all-wheel drive system, with a rear differential lock to prevent power transfer between the rear wheels. The available ride height, which can be adjusted with the help of the electronic power lift system, is a mere 11.7 mm at its highest setting. From the road a1d647c40b
