* Photo shop.com/photoshop_basic # Image Editing Software Image manipulation software is a very powerful tool, and capable of producing some amazing effects, but it is also one of the most expensive pieces of software on the market, and well beyond the budgets of home users. There are many software programs that can be used to perform basic edits to an image before exporting it. ## Automating editing with layer masks Because layer masks allow transparency, you can use them to paint over unwanted portions of an image in Photoshop. However, you need to be careful when using layer masks. Unlike most editing tools, where you can cut and paste portions of the image directly (if only temporarily), layer masks can't be removed. That means that any editing you perform with layer masks becomes permanent, and any changes you make to an image with a layer mask cannot be undone. * Photoshop.com/home ## Automating editing with Smart Objects The 'Smart Objects' layer group on a Photoshop file represents a group of pixels that can be manipulated independently. (You can think of a 'Smart Object' as a special kind of layer in which you can group and manipulate individual images and layers.) Because you can manipulate pixels directly in a Smart Object, and add and alter pixels as you like, you can create any kind of image or change that you want. However, you also have to create an object to begin with, which means that you are restricted to the specific pixel types that your original image is made up of. When you are done, you can add the 'Smart Object' as a regular layer, and you can easily manipulate it like any other layer. * Photoshop.com/smarts ## Automating editing with floating text You can automate the task of changing the foreground and background colors of text on a Photoshop file with CSSs (**c** onventional **s** tyle **s**) set up in a floating text layer. One of the advantages of this method is that it has the same style, and you can apply it easily to every page or image on the page, rather than having to apply the style to each piece of text separately. Additionally, if you create any text, you can add the CSS to the text as it is created, so it's always applied to all future text, rather than requiring you to repeatedly reapply it. If

New York (CNN Business) The United States has just been ordered to pay billions of dollars to the sugar producer Cargill to pay for damages to Kenyan businesses from the country's devastating drought. The US District Court for the Southern District of New York ordered Cargill to pay \$60 million (\$43.5 million) in its lawsuit against the federal government. That includes \$11.2 million for damage to Kenya's economy, \$45.8 million for "property damages to Kenyan businesses," and \$0.7 million in legal fees. Between February and September 2018, the drought's effects reached into more than 100 countries, according to the United Nations. It killed 1 million livestock in Kenya and led to crop failures in neighboring Tanzania and Somalia, although it was less detrimental in those countries. US agriculture secretary Sonny Perdue suspended some payments to foreign governments in Kenya after the government failed to make its promised payments in September. The Trump administration later sought to have the lawsuit dismissed.Experimental pregnancy reduction by ovariectomy and thyroxine treatment of the pregnant ewe. In Experiment 1, ovariectomies were performed at 34 or 36 days of gestation. At 46 days of gestation in all or in half of the animals, implants were replaced with thyroxine (T4) pellets. In Experiment 2, those animals were treated with T4 alone and then killed either at 46 days of gestation (three groups) or at 47 days (two groups). Pregnancy was completely prevented in the ovariectomized animals regardless of the time of surgery or T4 treatment. Growth of the uterus in the T4-treated animals was reversed and became significantly different from control animals within 5 to 6 days. In Experiment 3, significant decreases in uterine weight occurred at 46 days of gestation in ovariectomized groups given or not T4, and within 5 days in controls given T4 (p less than 0.05). Within 10 days after ovariectomy, the number of glandular oxytocin cells in the uterine myometrium decreased. These studies provide additional evidence that gonadal secretions play an essential role in the early stages of pregnancy, that both the ovary and the thyroid play important roles in the initiation of pregnancy, and that the uterus is more sensitive to T4 than the fetus. case of employing a conventional refrigerant cycle device, a periodic performance
