I will be creating a simple table view with each row containing a title and then 3 UISliders. I am first struggling to set up my UITableViewController to hold the titles and size and then the 3 UISliders inside the cell. I am wondering if I should just have an array of all of the data and just cycle through each of the 3 UISliders and then just hold onto that data in an array like this: NSArray *NumbersArray = [NSArray arrayWithObjects:@"50",@"100",@"150",@"200",@"250",nil]; NSArray *TitlesArray = [NSArray arrayWithObjects:@"Measuring",@"Tools",@"Precision",@"Equipment",@"Accuracy",@"Costs",nil]; And then inside each cell I cycle through the data and setup the UILabels to show the values. What is the best way to go about this? A:
