First introduced in 1982, AutoCAD is still considered to be one of the most complete CAD applications available. It is used by architects, engineers, construction and civil contractors, electrical contractors, mechanical engineers, and industrial designers. One of the most highly rated CAD software packages, AutoCAD was among the first CAD programs to successfully cross the threshold from the drafting stage to the construction stage, allowing engineers to move from hand-drawing a blueprint to the computer-generated, finished product. AutoCAD is used for: Design and planning. AutoCAD is used for the design and documentation of construction projects such as buildings and bridges. Drafting and design. With a variety of views and functions, AutoCAD is used for detailed drawings of architectural and mechanical structures such as room plans, elevations, section, and cross sections. Computer-aided design. AutoCAD is used to simulate a variety of mechanical and electrical systems such as heating, ventilation, and air conditioning (HVAC), mechanical ventilation, air conditioner, and power generation. Product and Process: First introduced in 1982, AutoCAD is still considered one of the most complete CAD applications available. It is used by architects, engineers, construction and civil contractors, electrical contractors, mechanical engineers, and industrial designers. Created in 1982 by a group of software engineers at the University of California, Berkeley, AutoCAD was one of the first desktop-oriented computerized drafting and design packages. Designed to be an all-in-one application, AutoCAD was also the first to allow users to share their own design files with colleagues, who could all work on the same drawing, make their own changes, and collaborate. Initially, the software was available only for personal computers running the CP/M operating system

APIs Autodesk CAD File Format Autodesk CAD supports a proprietary file format that is based on EDIF Technology. Autodesk Corporation has ceased development on this format in favor of the DXF format. Autodesk DXF is supported in many CAD products, including AutoCAD Cracked Accounts, AutoCAD LT, AutoCAD 2008, AutoCAD LT 2008 and AutoCAD Architectural Desktop. Some current software releases still support this format, but it is not recommended for new work. It is mostly maintained for backward compatibility. DXF A drawing exchange format, DXF is a standard used by the CAD industry to exchange information between applications such as CAD systems and the user's documents. DXF was created by Drafting Exchange Format, Inc. (DEFI), and is a proprietary format. The design was approved in 1991 by the AIB Electronic Standards Group (AISG). It was published as a draft standard by AIB on April 1, 1992. Version 4 of DXF was officially announced at NACE '96 on September 18, 1996. DXF9 An updated version of DXF, DXF9 was announced at NACE '97 on October 19, 1996. There were some features added to the format, but it was essentially the same as DXF8. DXF5 DXF5 was announced at NACE '98 on February 1, 1998. DXF5 is a revision of DXF9 and is sometimes known as "DXF3.5". There were some additions to the format, but the biggest change was a new file format, "Magic Draw". AutoCAD first introduced Magic Draw files in AutoCAD 2000 and AutoCAD LT 2000. DXF DXF (or "DXF1") is a discontinued format for drawing exchanges. The format was announced at NACE '93 on April 30, 1993. It was first supported by AutoCAD in the R20 release on November 12, 1994. Magic Draw Magic Draw (or "Magic DRAW") is a proprietary file format introduced with AutoCAD 2000 and AutoCAD LT 2000. The format is proprietary and is supported by all versions of AutoCAD except AutoCAD R20 and newer. It is also supported by AutoCAD LT and AutoCAD LT 2008. DXF+ The next version of DXF (or "DXF2") was introduced at NACE '95 on November 16, 1995

I have a problem with the returned value of the COUNT function in mysql. The stored procedure works fine, but when I call it from the client, it returns unexpected values (which are in fact in the database). If I call this: SELECT COUNT(*) FROM tablename I get the correct number. If I call this: SELECT COUNT(*) FROM tablename WHERE id = '3' I get the same results. If I call this: SELECT COUNT(*) FROM tablename WHERE id = 3 I get the same results. So, here is the problem: SELECT COUNT(*) FROM tablename WHERE id = '3' or SELECT COUNT(*) FROM tablename WHERE id = 3 or SELECT COUNT(*) FROM tablename WHERE id = 3. or SELECT COUNT(*) FROM tablename WHERE id = 3. or SELECT COUNT(*) FROM tablename WHERE id = '3' or SELECT COUNT(*) FROM tablename WHERE id = '3' or SELECT COUNT(*) FROM tablename WHERE id = '3.' or SELECT COUNT(*) FROM tablename WHERE id = '3.' or SELECT COUNT(*) FROM tablename WHERE id = '3.!' or SELECT COUNT(*) FROM tablename WHERE id = '3.!' or SELECT COUNT(*) FROM tablename WHERE id = '3.' or SELECT COUNT(*) FROM tablename WHERE id = '3.!' I get the number 1864331023. If I use the dollar symbol it returns 18
