The app works like other OCR software, allowing users to load different images and outputs them in a searchable document format. In addition to standard image formats such as JPEG, PNG and TIFF, the app can also load and output PDF images. This is a useful feature, because just about everything in PDF format will be converted into text. Through the program, users can try to upload images from a computer or take pictures from their digital camera and convert them into a searchable document format. Once the conversion is complete, users can remove unnecessary items from the resulting document, such as pictures, text, logos and copyright information. A lengthy installation process The first step in the installation process is to download and install a free PDF OCR license. When the program is opened for the first time, a license must be inserted into the program. The license costs \$1 and is used to set up the application to work without restrictions on scanned image resolution, color depth, and number of pages. Once the free license has been installed, one file must be scanned to set up the conversion tools. It is important to note that this scan can be up to the maximum resolution of the scanner, depending on the quality of the input file. A fun but very tedious process The conversion process has three steps. In the first step, the program will scan the image and produce a searchable document, which is saved as a standard PDF document. This output is saved in the same location as the original file. In the second step, the user can remove the unwanted items from the converted document and edit the contents of the resulting text file. This text file can be edited by anyone, including those who don't possess OCR software. In the final step, the user must save the edited searchable document in any format of their choice. When the final conversion process is complete, the user can extract the desired text and save it anywhere they choose. A professional tool While OCR can be a simple conversion process and it can be performed using a wide range of free applications, the program still has many unique features. For example, the user can scale the resulting text document and define the size to output it, which is more convenient than using a free application. Furthermore, the program can allow the user to save the converted document in any format and in high quality, as well as transpose the font to match the font of the original document, in case the PDF font was changed. The program can
