
AutoCAD Crack +

Exercise summary This exercise will help you to create the basic components to put in the environment.

What's New In?

You can import marked up documents into a drawing by either pasting the paper into the drawing as images, or you can import shapes created from a PDF and customize them with your own text and layer masks. (video: 1:10 min.) The Markup Assistant allows you to control all of the formatting options of a scanned document, and visually edit and reposition the selected elements. When you are done, your changes are saved in the drawing for future revisions. (video: 2:40 min.) New features for Warping, dimensioning, and text The Dimension and Text tools feature dynamic curves, and more flexible bounding box controls. Edit text, objects, and surfaces with the Warping tool. The Freehand tool lets you draw strokes on top of existing objects, as if they were paint. Text joins are placed automatically with the new Text Previewer, and new Edit Text and Edit Text with Dimensioning tools make it easier to edit text objects. Warping and dimensioning tools: These tools allow for more flexible scaling and positioning when you are drawing on top of existing objects. You can now control the bounding box of the scaling and drawing steps, as well as the location of the scaling origin. You can easily switch between the default bounding box (8pt x 8pt) and an infinite box for more flexibility. (video: 3:55 min.) You can define the boundary of the scaling by drawing parallel or perpendicular lines. To add a control point, double-click the lines. To add a perpendicular line, click and hold the line. (video: 1:50 min.) You can use the scaling origin to place a control point anywhere in the drawing. The scaling origin is updated to track your cursor while you draw, and is saved to the drawing when you exit. (video: 1:50 min.) You can drag, resize, and reposition the control point in the drawing. You can drag from one boundary to another. You can change the scaling origin by moving it into the middle of the bounding box. There are two ways to snap to an existing dimension in the drawing. Click the dimension, and the snap point appears in the center of the dimension. Or you can use the dynamic snapping tool. Just draw along the dimension line, and the snap point automatically changes to the midpoint of the dimension. (video: 1:35 min.)
