AutoCAD was one of the first commercially successful desktop CAD applications. After its release, it quickly became one of the most widely used and popular CAD applications in the world. AutoCAD has been installed and used by millions of users on hundreds of thousands of desktops worldwide, and continues to be used today. History AutoCAD was originally developed as part of the firm's Revit product family, which started in 1978 with AutoCAD 1.0. The initial AutoCAD user interface was designed by Bill Webb and Allan Weisbart of the Weaver Company. The original AutoCAD user interface was a DOS-based application that ran on a 12.1 MB floppy diskette. It ran in 640x480 resolution with a 16-color (true color) graphics mode, and had no 2D printing capabilities. Autodesk was founded in 1982 as a wholly owned subsidiary of The Simpson/Times Mirror Company. Later, in 1992, The Simpson/Times Mirror Company sold Autodesk to Maxis, Inc. Maxis then sold Autodesk to a consortium of other software companies, including Media Vision Holdings, who merged Autodesk into Mayfield (NASDAQ:MAYN). The merger was later completed in November 1999. On July 30, 2006, Autodesk spun off its engineering, construction, and infrastructure software businesses (including AutoCAD) to a new company called Civil 3D Inc. On July 19, 2008, the Autodesk name and logo were officially retired and the company rebranded as Autodesk. In 1984, the first product upgrade was called Autodesk Release 1.0. The original version of AutoCAD introduced most of the features that would become the backbone of the Autodesk brand. Over the years, as new technology and software capabilities were developed, Autodesk would release upgraded versions of AutoCAD. We will be making a formal announcement when it is safe to do so. Thank you for your patience and understanding. — PlayStation Support (@PlayStationSupport) February 24, 2018 The outage occurred at 12:20 AM PT, and affected users were prompted with a message saying, "Sorry, the service is not available for the time being." While those who tried to use their consoles suffered the issue, as of 5:15 PM PT, the PlayStation Network was back up. One user shared a photo of the message that they received, writing, "While I was scrolling through twitter, I got a message saying the PSN is down. I immediately thought it was a scam, because the PSN looks like it was taken down by a virus. Turns out it was legit. Here is the message I received from the PSN." The outage is reminiscent of what happened to PSN back in November 2015. At the time, the PSN was down for nearly 48 hours. While the outage did not affect users' in-game experiences, the PlayStation Store was offline as well. This time, however, PlayStation Store remained accessible. For those with PS4 consoles who were unable to access their games, console owners were given the option of signing in to their PSN account and downloading them, or waiting for the next scheduled update. For users who opted for the latter, they received the following message: If you're affected by the outage, it is highly recommended that you back up your games to your console, or at least, take a screenshot of the purchase history for your account. If you still lose your purchases, it is highly recommended to contact Sony support. -goody Goody says when she's old she'll pull her dentures out of her mouth, pick up a sofa cushion, and bang her head against it until her brains leak out. We're gonna have to watch that on television, but at least we'll be doing it with Mad-Eye." - Remus Lupin, in Chapter 37 ca3bfb1094

Patterns of nutritional intake in adult Saudi males--results of a cross-sectional study in Riyadh, Saudi Arabia. Nutritional status among adults in Saudi Arabia is little known. To determine the prevalence of micronutrient deficiencies, and to evaluate the nutrient intake in healthy Saudi males, a sample of 120 individuals (60% men and 40% women) aged 19 to 60 years, was recruited. Nutrition intake was assessed by 3-day weighed food records, anthropometric and biochemical measurements. Mean body mass index was 26.6 (SD 4.0) kg/m². The average daily intake of proteins and calcium was 3.5 (SD 1.5) and 379 (SD 151) mg, respectively. Mean energy and fat intakes were 1,819 (SD 712) kcal and 47 (SD 19) g, respectively. Iron intake was low at 13 (SD 5) mg/day and vitamin D inadequacy was high at 65% for Saudis. Daily intake of carbohydrate, protein, fat and calcium were above the recommended amounts for adults, but those of vitamin D and thiamin were below the recommended daily allowance. Vitamin C intake was below the recommended intake for women, but above for men. Results of this study showed a high prevalence of micronutrient deficiency among Saudi males.
