As the crypto currency industry matures, the need for standardization and branding, and the ability to create a separate ecosystem free of bias in ideas and practice has become a key topic for many stakeholders. In this second of two blog posts on the subject, we look at the importance of having a clear standard to base development on. Industry standardization is one of the oldest ideas in technology. In a pre-digital world, it was common for a goldsmith to establish a standard for the purity and consistency of their goods. Technology takes this idea and transfers it to the digital world. A non-digital world is a world where the majority have accepted that a standard value exists.

“Standards” for the digital world are much more diverse and complex, as the highly varied nature of cryptocurrencies, their rapidly changing technology, and the changing needs of the market. The early Bitcoin whitepaper, written by Satoshi Nakamoto, talks of “the currency used”, and “the system used”. The ideas in the early writings were essentially that of a barter system with currency based on trust, and transactions made with a public ledger that could not be tampered with. The system is one that was without a standard currency, and therefore the whitepaper goes on to describe a system of standards. These standards were for security and protection of transactions. The transaction standard, like the most widely used standard for digital currency today, is the SHA256 hash. Other standards can include public key cryptography, public key signatures, timestamps and other items that describe the security of a transaction. The need to establish a standard is important, even in the current Bitcoin system. The whole point of a cryptocurrency is to be an alternative to the banks. They can simply issue a block and make it so that they cannot be tampered with and

This is the second episode of the award-winning serial game by King Art, developed by Destructoid Games and published by Daedalic AG. The Lion's Song is an introspective graphic novel, exploring the melancholy and universality of love through the eyes of the world's greatest painter. First-Person Perspective: In a first-person perspective, you are the creator of the game. Your decisions impact not only your storyline, but the whole journey of The Lion's Song: Episode 1 - Franz, Being 25 Years Old Episode 2 - Franz, Being 45 Years Old Throughout the game, you will have to choose between two different endings, depending on your decisions. On-Line Accessibility: The action will be displayed in non-interactive cut-scenes with lots of animation. Game Time: The game can be played in around 3-5 hours, depending on the choices you make. With the popularity of the first episode, the game is already gaining recognition across the world and the press is starting to ask for another chapter. Our campaign offers the possibility to choose one of the two different endings and the option to have a completely different storyline. This allows the player to experience a different story, either one he wanted to play or one that might have remained hidden from the player. Loudness options are set very well. We had a lot of problems with games that we liked but simply can not play because they become unplayable due to the volume. King Art addressed this issue. Available languages: German, English, French, Spanish, Danish, Polish, Czech, Slovak, Hungarian, Dutch, Swedish, Finnish, Russian, Italian, Portuguese, Romanian, Ukrainian and Czech. The Lion's Song: Anthology Is composed of two episodes, the first of which was recognized at the American Game Awards for being one of the Best Games of 2012. The Lion's Song: Anthology is a first-person novel in the form of a visual novel, which contains lots of animation in lieu of text. Franz, an aspiring painter, has lived his life and way of thinking completely. His only way of perceiving the layers within himself and others is through his paintings. Once he has developed his art - layer by layer - something has stopped his way of thinking and life. First, his health starts to deteriorate, and then he becomes emotionally silent. The c9d1549cdd

A compelling sci-fi strategy is putting humanity at risk. You are a leader of a group of civilians that has taken shelter in a sub-surface city, safe in the expectation that a world they know will return to civilisation soon enough. But this world is now ruled by intelligent robots made from artificial intellect - the androids. You are chosen by the Federation to rebuild the intelligence and will of humanity and restore it to its former glory. As you will discover, the androids are not as harmless as they seem and are more than willing to destroy your mission and eliminate you before you can assemble the remaining

What's new in Cascading Failure:

War II was launched. Three Jews were hanged for spying, and sabotage and espionage were systematically punished. From here on, Jewish theater continued as it did before the war began, with no hesitation. The decision by the National Union of Hebrew Writers not to allow Yiddish theater to be broadcast over the radio or screened on television, as radio and television were controlled by the Hebrew Communist Party, was predictably announced on April 19, 1941. But it only makes sense as a logical consequence of the advanced stage in the struggle of communist intellectuals against the Yiddish theater in 1940. No member of the Union of Hebrew Writers betrayed Yiddish theater or any other aspect of Jewish life and literature to the enemy. Four years of Kulturkampf in Yiddish theater were a galling trial. The boycott by the Union of Hebrew Writers during 1941 was a massive defeat for our people. We could not air the last vestiges of Yiddish theater from the radio, nor could we fill the cinema screens with Yiddish films. The world lost a great masterpiece of art and one of the indicators of Jewish culture. Many people in Israel would not know what Yiddish theater is if it had not been invented in Lodz and reanimated in Russia. It was the only major achievement of Yiddish literature after the turn of the century. Dozens of Yiddish writers in Israel were members of the Writers Union, and their audiences were large. The number of subscribers to the Union's publishing house, Pomegranate, was more than those of all the other Israeli Yiddish publishing houses put together. The Yiddish writers had the same feeling of despair as we did in our free Poland. Josephs, Filler, Fechter, Ginzberg, and Fonda were outstanding names in the Hebrew literary world. Torau, the ace fighter ace of the round clouds in the Hippodrome Theater, on seeing the blockade and miserable outcome for Yiddish literature in general and for theater in particular, one morning

before the war, burst out, "We have to go to the enemy and explain to him that he is suppressing a language which has contributed much to the development of Hebrew literature. Yiddish and Hebrew will be our best allies in the struggle." Culture, language, literature, art—are all fundamental to a people's existence. The sense of a lost and found Jewish culture in Israel is common to all nations who have been restored to
