This is Cosmic Flow. This is life, this is us. These are our shared and unique experiences. A: This is a really nice piece of art. Some thoughts and things I noticed about it: You can see a lot of research into the field of, what they call in literary criticism, 'postmodernism'. Which essentially means taking (often wildly out-of-context) quotes out of old texts and putting them next to what might be a more representative quote. It's a historical way to recreate older landscapes that have been abandoned in a more impressionistic style, one that leaves open the original meaning behind and substitutes it with the new, more modern, individualist philosophical interpretation. The use of a single color as a 'frame' works very well, and I think it's good that their work integrates with their sense of what a frame is. Unfortunately it doesn't seem to be better than what the artist had already done with the transition from 1 frame to 2, and it makes the end of the 2nd frame of text seem abrupt, but the art-elementality of it all is lovely. That dark red has a nice credence of being representative of blood. I think there is a suggestion of 'rust' in it as well. I think there is a nice, unintentional humor at the line 'This is Cosmic Flow', as, IMO, is a great goal to live life that is 'in the flow', or simply living and basking in a way that is in the flow. Looking at it from a creator's standpoint, it seems like a great experience, though it seems not to be a very personal or unique one. I think that the artist should follow a more postmodern approach to this and do something similar, but with line, color, sound and architecture. It would be a fresh, personal take on it d41b202975

### What's new:

**Cosmic Flow delivers the most immersive VR experience; a soothing journey of cosmic space Star Trek: Bridge Crew has been an award-winning VR game for more than two years and is packed with tons of content and user-generated content. It has been nominated for Gamescom's award for Best VR Game and is currently up for 'Best VR Game Launch' at the VRX Game Awards 2020. In a new VRtitle, Payday VR, you step into the shoes of a doctor trying to save the world from a deadly virus. Despite more than 200 global releases, many of them as 360° titles, there hasn't been a true VR medical game until now. How do you define VR content? We define VR content as any virtual-reality-based story, game or experience that is at least partially narrative and that is intended for use with a headset. We focus on cases where a story line is critical to the experience and where it would be hard to tell a story without the immersive nature of VR. Is there a shortage of high-quality content out there today? There is plenty of high-quality content. In our opinion, the quality isn't there in a broad sense. Often, there is no mass market game that has an appropriate, compelling premise, affordable price point or easy access to developers, or a variety of games to choose from in the same category. For every well-done VR game or experience, there are a dozen games that you can't play without an Oculus-powered PC VR system. So, in that sense, you could say that there is a shortage. What can Spacewar! do to avoid being labeled as VR too early? Spacewar! isn't necessarily VR-ready because we haven't done all we can to ensure a high-quality experience. But we don't want to wait until we're absolutely sure that it is. The goal is to stimulate the development of VR technology and there are many ways for us to go about that. What can Spacewar! do about this VR shortage? VR is seen as a cheap reality by outsiders, an almost commodity to be exploitable, but that's not our intended goal. Our goal is to inspire experiences that have depth and quality, and we want to be a part of the industry that fosters that kind of enthusiasm.**
