Easy DriverPacks V5.3.3 (5.3.3.2) Windows XP 7 8 (32 64bit)If you have any problems with the registration process or your account login, please contact contact us. The Muscle and Brawn Forum is dedicated to no nonsense muscle and strength building. If you need advice that works, you have come to the right place. This forum focuses on building strength and muscle using the basics. You will also find that the Muscle and Brawn community stresses encouragement and respect. Trolls and name calling are not allowed here. No matter what your personal goals are, you will be given effective advice that produces results. Please consider registering. It takes 30 seconds, and will allow you to get the most out of the forum. Alright here's my question. I'm new to lifting weights, and I've been a beast on the bike for most of my life (lots of sprints, lots of climbing, lots of km's, etc), and I'm wondering if I should be focusing on putting on more muscle mass, or my ability to climb and sprint. Also, if it matters, my weight is about 170 (probably about 10% body fat). At the moment I'm doing really basic simple movements of the bar, squats, bench, bicep curls, lunges, and some shoulder things (like sitting with the bar above my head). I do pushups and situps. I don't really have a clue about proper form, and I have no idea if I'm doing anything but getting really really tired/injured. I've read that barbell squatting is better than doing strict dumbbells/barbell squats, and I have my doubts about which
