Real Air Beechcraft Turbine Duke (Aircraft) Beechcraft B60 Turbine Duke - VC texture update v2.jpg. I forgot. FSX 5 Here you can download the LINDA aircraft module for the RealAir B60T Duke TurbineÂ .Q: Is there an easier way to debug Sphinx? I've been using Sphinx to document several Python packages using Eclipse and Pydev. The documentation documents the contents of the.py files and there are links to the source code in the documentation. The documentation and source are separate in that they can be edited independently of one another. The only thing linking them is a view that can be automatically updated when the.py source is updated. My need today is to write Sphinx documentation on top of several subpackages (products) within a single package. I have been using a separate Sphinx template for each product. I will need to reuse template content in multiple locations throughout the one product, but with different topic labels. The challenge I have is that I have to manage the myriad of topics within the same documentation using Eclipse as my editor. I can easily create the topic labels, but I am unable to find a way to relate the topics to the.py code. For example, if I have a topic in a template that relates to a function in the.py code, then I would like to be able to have a link in my documentation to the function in the.py code. This will allow users to navigate the topics in the documentation directly from the.py file. Is there a way to do this? I would much rather not have to resort to custom links in each file that I document, I prefer the normal hyperlinks that Sphinx uses. But it appears that the documentation that Sphinx generates ignores any links in the.py files. EDIT: The linked example below is what I am looking for. I
