We think that in-depth play styles can be enhanced by injecting player movements during critical moments in the game. We also believe that the authenticity of the player movements will bring more enjoyment to FIFA 22. As explained above, the use of "HyperMotion Technology" allows us to not only deliver highly realistic in-game action but also increase the enjoyment of FIFA 22. This can be seen when a player is making a tackle or intercepting a pass. A second camera inside the trackers captures the movement of the player using a camera, which makes the movements of the player realistic. With the goal of making in-game actions more realistic, the player on the ball will be highlighted by using the reflective materials on the shoes. One camera is positioned at the top of the players' boots, and the other camera is positioned on the ball. When the player hits the ball, the cameras will pick up on the ball and reflect the movement of the player for both cameras. This creates a great sense of immersion. Also, this technology allows us to increase the speed of ball movements, including predictive movements, which further enhances the feel of the game. - You can play FIFA 22 in true hyper speed! PES 2017 introduces "Proprioceptive Movement Control", which ensures the player's movements are easily controlled. This leads to a more realistic gameplay and increases the player's presence in the game. Furthermore, the players can enhance their performance and gain a better control of the ball. This

enhances the involvement of players in the game and will lead to the increase of in-game enjoyment. - Precise control will make the player's mastery of the ball noticeable. Responsive ball movements, responsive control, and increase of ball possession One of the key elements for improving the enjoyment and immersion of FIFA matches is the responsiveness of the ball. Realistic ball movements, thus, can provide a different feeling of control to the game. With a ball that moves smoothly and is tough to control, players are encouraged to be more expressive and can show their skills to their opponent. - Faster ball movements can be achieved with smoother responses The new predictive ball movements create a realistic and expressive ball. This function was introduced in FIFA 17. In previous games, the ball could be controlled easily with the quick flick of the stick. However, this has been improved in FIFA 17. For example, when a ball is thrown
