If you like minimalistic artwork and similar games, this is a good game for you. You'll have a fun time solving puzzles with your tiny fingers. How to play

Click on the object(s) you want to cut. Move the cursor around with your mouse. You will see a little yellow slice line appearing. Press the keybindings that match the movements of your mouse cursor. What can I do with the particles? There are particles on the screen that cause the cursor to rotate. Press N to reset the particles. You can change the sensitivity in the settings. Why the finger simulation is not visible? This game is totally playable with a mouse only. The finger simulation is only there if you want to play with your gamepad. How to play another game mode? You can play more than 225 unique levels. HOW TO PLAY: You can play the entire game in the free mode.

You can try the creator mode by purchasing the game for 69.99 Eur. The game has multiplayer. It's not mandatory for multiplayer to play. If you want

to play with other players, you can join a game with two players with a game called "Twilio". To play alone, you have to login to the web client (you need an email to login). To play in multiplayer, the game needs TWO devices (desktop or laptop). Both devices have to be placed next to each other to play with other players. You can set the server IP and port in the settings. If you play in game with others, you can make use of their settings. You can change the keyboard keys if you want: Gamepad keys, Arrow keys, Space, Esc, Backspace, Enter, Cancel, etc. There is the same mode as the creator mode. You can buy the game for 69.99 Eur. Share your creations. You can do this with this game, but you need to sign up on a social website. It is not required to sign up, but it is for sharing you creations. You don't need a Facebook account to share you creations. D

Features Key:

- The game is fully asynchronous.
- The file system of the game is made so that any element can be shared by players, including widgets.
- Background rendering is really efficient with multiple CRTCs and a background queue thread.
- General graphical tweaks.
- The position of imported objects can be configured using GParam
- Multithreading with multiple processes, but only one per player
- The python script consists of two files, the importation script and the intro script
- The game map is not sprite, is vector rendered with OpenGL
- The game is made to use GLUT and lacks any full screen support

Hello and welcome to SLICE, the revolutionary combat platformer game! A game by Drayus RaCkZ

You can choose between two modes: either "Classic" mode or "Rush" mode

You're the captain of your dream ship and your ship is now traveling on a space journey

Your goal in this game is to escape the system and find all the items on the planet

To escape the system, wait until the ship is in the right position

But you'll soon arrive at a time collision

There's only one thing to do - jump to the precise moment that the time starts

moving again, and change to "Flash time before a jump"

Then, set your flight forward! Collect all the ornaments to get the card color of your choice

Don't forget to play with "Game Speed" (on Classic Mode) to get better results!

But you have to survive for 75 minutes to escape the system!

All goes well until you pass the last obstacles and reach the wall of the launch pad

You have to make a decision - move the ship forward and try to get the last piece to escape the system

Or, go back to the station and collect it there?

If you're too far from the station, you'll have to go back to the starting point
