Zoomy Description: This method uses infrared heat to fry foods you hold inside the tube. It sounds a bit scary, but the inventor claims that the design is as safe as the electric ovens it replaces. You start by placing your food in the enclosed microwavable tube. Next, you apply RF energy to the bowl, which heats the food from the inside. Finally, the infrared beam is triggered, which causes the inside of the tube to become steamy. This gives you a crunchy hot dog/burger/steak and crispy fries at the flick of a switch. My personal experience with this Z-Burger: I have not tried it myself, but the video shows that it works fairly well, especially for soggy burgers. Official descriptions: The Z-Burger™ delivers the flavor, safety and flavor of your favorite burger without the risk of cooking it in your microwave. It also features an innovative heating method for fresh or frozen food which eliminates the need for the heat power that is commonly contained in microwaves. Our product is the only one in the market that allows consumers to enjoy their favorite comfort food and beverages while cooking in a safe environment. It saves time and eliminates clutter in the kitchen. Why should I try this product? You can't cook in your microwave, right? With Z-Burger you can enjoy the best of both worlds. What is the Z-Burger™? This is a commercial grade microwave which is equipped with a conventional microwave design which uses both microwave and infrared heating sources. As you will see in the video, the Z-Burger™ system allows you to prepare the most popular foods such as burgers, hotdogs, chicken fingers, pizza, egg roll and more. Even ice cream, soup, salad and more, can be prepared with the Z-Burger™ system. How to use the Z-Burger™ System To prepare your food, you must place the item in the inner heating chamber, press the button and then wait for the system to warm the food. Once the correct temperature is reached, the infrared heater will automatically heat and steam the food, allowing you to cook your food in a safe and healthy environment. How it works: The system consists of three sections: The inner heating

chamber that provides safe and convenient cooking of food The outer microwave chamber that allows you to continue cooking in your microwave oven The infrared heater that provides the heat to quickly steam the food b7e8fdf5c8
