History of AutoCAD In 1982, Autodesk, a software company with offices in San Rafael, California, introduced AutoCAD (also known as 2D drawing program or Computer-Aided Design (CAD) program) as the first widely available CAD program for the desktop personal computer. AutoCAD (1980) ran on early microcomputers such as the Sinclair ZX80 and ZX81, and their derivatives. The program had no native 2D graphics capabilities, but it could read and display most PostScript and laser-printed 2D or 3D drawings. AutoCAD cost US\$1,950. The earliest release of AutoCAD was 1.0. In December 1982, Autodesk released AutoCAD, which was originally designed for small- to medium-sized business, including architectural, civil engineering, construction, and electrical engineers, and manufacturers. AutoCAD was intended to enable users to create 2D drawings in 2D format, or to convert an existing 2D or 3D drawing to 2D format. The 1982 release of AutoCAD was the first widely available desktop CAD program for personal computers, and became the standard 2D drafting program on the desktop computer. In its first year, AutoCAD had over 10,000 registered users. First major AutoCAD releases AutoCAD was originally a single program, running on a proprietary DOS-based operating system known as AutoLISP. Later releases of AutoCAD continued to run on AutoLISP. AutoLISP was first released in 1979 by Ray Allen, an expert in microcomputer programming languages. The first major release of AutoCAD (version 1.0, 1982) was the first widely available computer-aided design program for the desktop personal computer. That same year, Autodesk released an updated version of AutoCAD (1.1) that incorporated the features of other CAD programs. Later versions of AutoCAD were released in 1983, 1984, and 1985. In addition, a release of AutoCAD was also produced for the Macintosh in 1984. Version 1.1 (1983) On September 14, 1983, Autodesk released an updated version of AutoCAD (1.1
