Q: How to set dimming options on qiskit circuit? I am trying to model a simple phase shifter import qiskit as qc import numpy as np from qiskit import BasicAer circuit = BasicAer.qc.RX(10, 0, 'wsqc', False) # 0 0 0 0 0 0 0 0 circuit.measure(2, 1) # 0 0 0 1 0 0 0 0 circuit.measure(2, 2) # 0 0 1 0 0 0 0 0 circuit.measure(2, 3) # 1 0 0 0 0 0 0 0 circuit.measure(2, 4) # 1 0 0 1 0 0 0 0 circuit.measure(2, 5) where x is the real number of the phase shifter, and y is how many qubits are used to calculate the phase shifter. I want to do some errors on the phase shifter circuit to find out if it is an X, or Y, or YX, or YY, XYY, or XXY circuit (I know it is not a Z-XX circuit) So the question is how to set the dimming options of the phase shifter? And I found that "set dimming" can do that. If you see the picture, they are used exactly the same way. But I am not sure how to set them up and I couldn't find out the meaning of dimming. Any help will be appreciated. A: I don't know how to set up the dimmer in Qiskit. I can tell you how to do it in my simulator. When using the simulator, you need to specify which dimmer you want (x, y, z, or H) by setting dimmer_type in the config. I recommend changing dimmer_type to set_dimmer because that is a good example of how set_dimmer actually works. You can follow the instructions on its help. In addition, I don't know how you are computing the phase shift. Please let me know if you need the code that goes along

Information would be collected from over 1 million O2 customers that should use an International Roaming SIM card on their phone. The department said: "This research is designed to find out how the subscribers are enjoying roaming and how this is affecting their service. "It will also help create a plan that will make travelling easier for users, while at the same time saving money for the taxpayer and responsible for less complaint calls to the regulator." It added: "The project will be a great test-case for other EU countries to learn from." A total of 1 million O2 customers will be targeted, and the research will last for the next six months. For the research, the department added the 600,000 O2 customers who have an International Roaming SIM card and the 100,000 O2 customers who have not yet had an International Roaming SIM card. The Department said that calls to the regulator will be monitored to see how the complaints from customers dropped in comparison to the same time last year. Dr. David Shipperlee, the Department of Communications' Science and Technology Innovation and Research Director, added: "This research is part of an evaluation of the data collection and retrieval systems. "We are looking at the ways data is collected on the service and how it can be used." The cost of this service is £14,600 which can be paid over three months and the department added that the research is aiming to collect both qualitative and quantitative data. Social commentary aside, I am sure that this is a well-conceived and well-designed programme, deserving of full support. Let's be fair to O2. When something on this scale came up with RIE, they were the only company that said they would offer the service, and they were the only company that could deliver it. They did not try to have it up and running for free or to make money out of the project. Instead, they made a sensible investment to introduce the service in a competent manner. They didn't drop the ball on this one, by any means. They've done a good job thus far. But it is good to see other companies doing things like this too. So much of communication over the last few years has been a defence of the company behind it, rather than a defence of the product or service. When this research
