Each string is supposed to be saved into a different line. I wrote the following function:

```
public void SaveData(string fName) { ifstream data; string s; data = new ifstream(fName); while(data >> s) { Console.WriteLine(s); } data.close(); }
```

 But this seems wrong because I'm not filling the stream with anything. I'm not sure if this function should fill the stream with something or if I need to write another function to store strings in a file. A: You have to open the file for reading and then read the data into the string variable, you cannot use >> on a ifstream, it is for writing:

```
public void SaveData(string fName) { string content = "";
```

A: I don't have Autocad 16 and I'm not sure how to install the keygen; but you can try to get it from the autocad.diz online file. The file is 10kb and you can click the link to get it. Edit: Found a new one! A: I also have AutoCAD 2016, I have the latest.NET Framework installed. The keygen works by downloading and replacing the autocad.dll in c:\program files
