History Autodesk was founded in 1980 by John Walker. Prior to founding Autodesk, Walker worked as a licensed surveyor and land developer, with a focus on data processing and analysis. Walker began his career in the land development industry by purchasing computers from surplus sources and repurposing them for his own needs. In 1982, Autodesk was founded as a result of this practice. It was the first self-made microcomputer company in the United States. The original purpose of Autodesk was to design, develop, and sell products for the microcomputer revolution. The company was formed after Walker sold his first computer and was able to recover some of the costs of the purchase. This experience taught Walker that he could not expect to design and market a CAD system on his own. To market Autodesk's products, Walker recruited industry luminaries to serve as advisers for the company. Autodesk's advisory team included John McCarthy, a renowned computer scientist and pioneer of artificial intelligence; Norman Albuquerque, who had taught Walker about programming; and James Paul Gorman, an expert in knowledge engineering. Autodesk released its first product, AutoCAD, in December 1982, as an early example of a point-and-click GUI-based computer-aided design (CAD) software application. Designed for use on an 8-bit microcomputer equipped with a graphics board, AutoCAD was the first product to be designed for personal use and released in the DOS environment. Initially, Autodesk operated with little financial support from the industry, capitalizing only

on investment from its own founder. The company struggled to find users and revenue during the early years of its existence. Autodesk began to receive support from investors, venture capitalists, and the computer industry as a whole. In the early 1990s, Autodesk became a publicly traded company, listed on the New York Stock Exchange. Since then, Autodesk has developed a broad portfolio of software products, including AutoCAD, Maya, SketchUp, Alias Wavefront, and ENOVIA. The company has also partnered with other software companies, including Bentley, Dassault Systemes, HP, MTH, Microsoft, and Siemens. , Autodesk had 200 employees located in Canada, Austin, California, Colorado, Oregon, and Virginia, as well as distributors in the Netherlands and Russia. The company also had 70,000 registered users and 1,300 reseller partners, which

Save and Share: Autodesk is building a social networking component into Autodesk Cloud. With this new feature, you can easily share, save, and collaborate with your design projects across multiple devices. (video: 1:40 min.) Revisit: Revisit lets you easily capture the nuances and details of a design you're working on or reviewing. You can capture your work in a drawing and then easily navigate your design using 2D and 3D tools in AutoCAD, as well as co-author your design with others. (video: 1:24 min.) Architectural Visualizer: Visualize the construction of 3D models for the objects you're designing. Create a model, such as a window, door, or a façade. Visualize your 3D model from a view that changes as you zoom in and out of the model. Or visualize your model from a bird's-eye view and use the pan and zoom controls to select any part of the model and see it in 3D. The depth cues in the view and the selection tools enable you to explore your model from any angle to identify details and study parts of the building. You can also make changes to your design using the tools available in the Architectural Visualizer. (video: 1:10 min.) Render 3D or VR: Rendering your designs is a great way to help visualize and share your projects. The new renderer adds quality, flexibility, and speed to your renderings. You can now render a 3D model using a range of output formats, including VR, to make your work look and feel more realistic. You can also model to your workspaces to incorporate an immersive

experience that allows you to place models in your browser. (video: 1:10 min.) Visual Style Builder: With Visual Style Builder you can apply a visual style to any drawing or view. Apply a visual style to a drawing using a visual style. View your drawing using the new visual style, and it's as if you are viewing it with your new visual style applied. (video: 1:18 min.)
