A: In your shell script, you're first importing and then exiting:
`import datetime exit` Remove the `import` and `exit`, and just have your code, which should work. EDIT In a comment, you say that running your shell script hangs without importing. If your script hangs when you run it by itself, then it isn't running your shell script at all. It seems to me like it's running the shell script, but trying to parse the imports when it doesn't have them. That would mean that it is simply hanging while running, not halting until the imports are completed. Instead of using the imports to add the timezone, it looks like you might be better served to just call the `date` command directly: `datetime.datetime.now()` If you change the script, you may want to try it out by calling the script

from the command line, adding your imports and removing the exit. If that works, then it is very likely that your shell script will work. If it doesn't work, it might be a parsing issue.

Efficacy of Resilient Linear Antimicrobial Coated Sutures in Prevention of Periprosthetic Joint Infection After Total Joint Arthroplasty: An Updated Systematic Review and Meta-Analysis. Periprosthetic joint infection (PJI) remains a major complication after total joint arthroplasty (TJA). Nevertheless, most of the previously published trials performed for comparison of current and novel antimicrobial agents showed a lack of statistical significance and a small effect on PJI. The objective of this study is to evaluate the efficacy of resilient and/or nonresilient sutures coated with antimicrobial agent in prevention of PJI after TJA. After searching in OVID Medline, Embase, Cochrane Library, and PubMed databases and consulting with experts, we carried out the meta-analysis. Two reviewers assessed the quality and extracted data from all eligible studies. Sensitivity analysis was performed. A total of 12,342 patients (19,377 joints) were included in the meta-analysis. Although some antibiotics coated sutures showed a trend of decreased PJI compared with the control, a statistical significance was found for implant retention rate (odds ratio [OR] = 0.69; 95% confidence interval [CI] = 0.47 to 0.99; P = .04), occurrence rate of subacute or late infection (OR = 0.63; 95

How can I do that? A: The PhpStorm documentation on Symfony shows how to integrate a Symfony project: I think that's what

you're asking for, a Symphony project to be embedded in PhpStorm. If not, please clarify. A second man has been charged in connection with a fatal stabbing of a Kingswood Township man in December. Jermais Johnson, 18, of Gwynedd was arraigned via secure video Monday at Central Booking in Philadelphia. He was charged with involuntary manslaughter, criminal conspiracy, and firearms offenses. He is being held on \$300,000 bail at the Philadelphia Prison System. Earlier this month, Eric Forney, 18, of Easton was arrested on similar charges in connection with the deadly attack. He is being held at the same facility. Investigators say Johnson and Forney each stabbed another man multiple times before fatally stabbing James Ritchie, 32, of Kingwood. Ritchie died after being taken to Penn Presbyterian Medical Center following the incident. Anyone with information on this case can call Philadelphia Crime Stoppers at 1-800-PHIL-TIPS.

[Epidemiology of ankylosing spondylitis (AS) in southern European countries]. Ankylosing spondylitis (AS) is a chronic inflammatory disease that primarily affects the sacroiliac joints and the axial skeleton. In Europe, AS is mostly confined to Southern European countries, although western countries are also affected. In Spain, there are currently approximately 10,000 affected patients, representing the third-largest number of AS patients in the world. Our objective was to describe the epidemiology of AS in Spain and other Southern European countries. The prevalence of AS in Southern European countries is between 1.7 and 2.5 per 10,000. Studies carried out in Spain suggest that the incidence of AS is between 10 and 25 new cases per 100,000 person-years. The peak of the disease

occurs between 30 and 50 years of age. The incidence of AS is similar in women and men and the disease is equally distributed among the different geographical regions of Spain. Predicting survival in septic patients in the emergency department. To evaluate the accuracy of pre-hospital risk stratification in predicting survival among adult patients with se 6d1f23a050
